Artificial Intelligence Can Save America

By Cliff Kincaid* President, America's Survival, Inc. www.usasurvival.org

I was hopeful, at one time, that a left-right coalition could stop at least some of the Artificial Intelligence (AI) data centers because of their potential harm to the environment and role in a federal surveillance program. I was skeptical of President Trump's collaboration with Big Tech and I thought it best to pause and consider what we are getting into. But I am convinced that AI technology for military uses is absolutely necessary for the survival of the United States.

Veteran TV producer Jerry Kenney, who has carefully studied the evolution of television and technology, says the basic question about the construction of AI data centers is: ***what data?*** He concludes, "WE are the data," and was on my YouTube program discussing what can and must be done to stop these data centers' drive for unprecedented surveillance powers over Americans.

The "progressives" hate Elon Musk because he owns X, developed an AI company, runs SpaceX, and defends Western civilization.

On the other hand, our enemies are also the targets, based on the data we must collect about them. The evidence shows that AI technology has been used successfully against Iran by the U.S. and against Russia by Ukraine. The technology acts as a "force multiplier" by instantly processing massive volumes of satellite feeds, drone surveillance, and classified intelligence in our weapons systems. "We power every single Western power that is at war," says Alex Karp, CEO of AI technology firm Palantir.

The challenge before us is to develop only the number of data centers required for border control and national self-defense, including President Trump's Golden Dome and Golden Fleet. At the same time, Elon Musk's SpaceX's $1.75 trillion IPO promises superiority in space for the United States for the future. In this regard, his AI Grok is under assault by liberal groups and Democrats on Capitol Hill.

The stakes couldn't be higher.

Their real complaint is that Musk is an outspoken defender, like Alex Karp of Palantir, of Western civilization, and wants to see it preserved.

Foreign Funding of the Anti-Data Center Movement

Members of the House Energy and Commerce have asked for a special briefing on the "strong evidence" that growing opposition to data centers in communities across the country is due, at least in part, to foreign influence campaigns financed by China and Russia.

Another fear I have is that the anti-data center movement could undermine President Trump's growing economy, sparked by spending on AI, if carried too far. The firm Morgan Stanley's report cites economic "momentum in the U.S.," fueled in part by "investments related to artificial intelligence." The report adds, "AI-related spending is the dominant force in the current investment cycle—and critical to the resilient U.S. growth outlook. Business spending in the U.S. should rise 7% in the fourth quarter from a year earlier and 8% in 2027 overall."

Hence, the involvement of "socialists" Senator Bernie Sanders and Rep. Alexandria Ocasio-Cortez in promoting the "AI Data Center Moratorium Act" is a real cause for concern, leading to reasonable speculation that they want to sabotage or even collapse Trump's economic recovery.

The evidence indicates that the left side of the coalition I saw developing has been infiltrated by anti-American foreign interests and has become dominant in the national and even international conversation. These are the same communists working on behalf of China and Russia that I have dedicated my life to expose and defeat.

To understand this threat, I recommend the report, *Foreign Influence in the Campaign against American AI*, published by the Bitcoin Policy Institute.

Patrick Wood, the author of Technocracy Rising: The Trojan Horse of Global Transformation, calls the Bitcoin Policy Institute report "a polemic against the 70% of Americans who are protesting against AI data centers, etc." According to polling, most people oppose the data centers, but will they feel the same way if they find out our enemies are behind the movement to stop them?

Some people who helped elect Donald J. Trump think AI and the Data Centers which power the technology will be another tool to censor and control America. Citizen activist Lynne Taylor was on one of my programs explaining how ordinary people can fight back and protect private property and farmland. That's a legitimate concern.

But the Bitcoin report on foreign influence rings true in many respects, since the author, Sam Lyman, examines many foreign communist movements and foreign left-wing billionaires that are involved in the campaign against the American data centers. They are identified as linked to China and Russia and funded by U.S expatriate Neville Roy Singham, now living in China, and foreign billionaires Hansjörg Wyss and Alan Parker.

President Trump is counting on Alex Karp of Palantir to help build THE ARSENAL OF FREEDOM.

Source: Brock Sorenson, Palantir.

These facts bother me greatly. Their money, power, and influence are such that they can easily take control over the movement to delay or stop data centers here, despite their potential use in military applications.

Vatican Endorses World Government Control

In this effort, they have Pope Leo as an ally. In his encyclical, he makes the extraordinary claim, “International organizations, particularly the United Nations, are essential instruments for promoting a civilization of love, for they can foster dialogue among nations and promote the peaceful resolution of conflicts, the integral development of peoples, the protection of the most vulnerable, disarmament and the care of creation.”

That is left-wing pablum designed to make the U.N. into a world government that will control who uses AI and for what purpose.

“The encyclical is written in the language of 20th-century liberalism, with the United Nations and international bodies playing an outsize role,” notes conservative columnist Daniel McCarthy. “Leo compares AI to the Tower of Babel, yet that image applies at least as well to the U.N.”

Alex Karp and Ukraine’s Zelensky.

On Capitol Hill, the Bitcoin report says, the “progressives” against data centers are led by Senator Bernie Sanders, who convened a panel on “the existential threat of AI,” in which two of the four panelists were linked to the Chinese regime.

The report said, “Two officials tied to the Chinese government, one an active Counsellor of the State Council, were invited onto a US Senate platform to advise the United States on slowing its own AI buildout. The panel was the culmination of an influence campaign across three documented streams of foreign input: attributed PRC [China] and Russian state-media activity directly targeting US data centers; a CCP-aligned US nonprofit ecosystem producing parallel domestic content; and a foreign-billionaire dollar trail running into the very coalition that produced the Sanders–Ocasio-Cortez AI Data Center Moratorium Act.”

That bill “would enact a reasonable pause to the development of AI to ensure the safety of humanity” but would of course only apply to American AI. China and Russia would therefore benefit.

However, if the United States is disarmed in the race for AI technology, as a result of such a lobbying campaign and passage of the bill, we are potentially vulnerable to an attack launched by adversaries who have developed their own AI weapons and have an advantage over us.

A Practical Solution

Broadcaster and AI critic Jerry Kenney says the real issue should be about what AI will be used for, not whether data centers will exist. They will be built, he says, and the debate over their locations misses the point. “This is a big country,” he notes, with plenty of room for them, and they can also be put in orbit.

“I have two simple questions about mega data centers,” he says. They are:

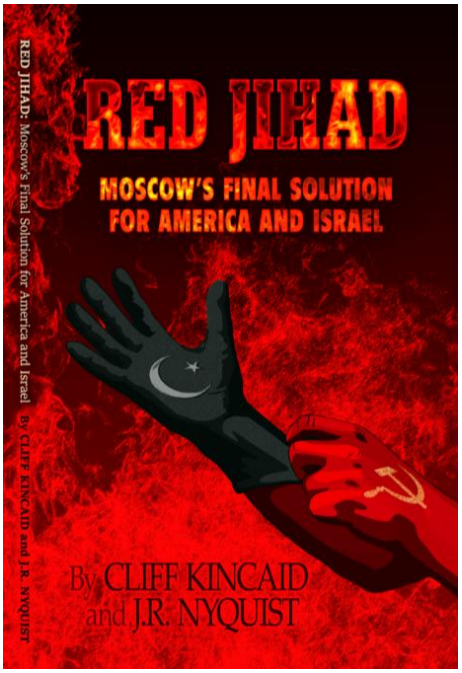
- What data will they be processing?
- If the data is collected from the citizens, what is the real goal?

The role of data centers in a national surveillance program is a major danger and should be opposed. However, the role of AI in weapons systems that could maintain American military superiority over China and Russia is something I believe must go forward, and data centers to bolster this effort must be built somewhere.

Kenney is alarmed by a company called Bitdeer, which has established data centers in states such as Texas, Tennessee, and Washington, and has active projects in Ohio, where it has been developing sites in Massillon, Niles, and Clarington. Its chairman and CEO, Jihan Wu, is a cryptocurrency entrepreneur born in Chongqing, China, but now identifies as a Singapore citizen. However, Tom Zawistowski of the Portage County (Ohio) TEA Party defends the data center projects in Ohio. He says, “We Can and we MUST build safe data centers that benefit America!” His website proclaims, “Don't believe the Leftist Lies about Data Centers!”

AI Tech Firm Palantir

One factor in my new perspective is the respect I have developed for AI technology firm Palantir and its CEO Alex Karp. Although he comes from a "progressive" background, he is outspokenly pro-American and recognizes the geopolitical dangers faced by the United States and the West. He is very critical of modern-day left-wing "progressives" like Senator Bernie Sanders, a leader of the anti-AI and anti-data center movement.



An "AI overview" says this: "Despite previously identifying as a Democrat, Karp formed a close alliance with the Trump administration, providing data technology for ICE deportation efforts and co-authoring a book, *The Technological Republic*, that advocates for robust US technological and military dominance."

Maine Democrat Senate candidate Graham Platner, who has promised to dismantle Palantir, is a self-professed communist with a Nazi tattoo, as well as sex pervert.

Palantir has issued a manifesto stating that "The question is not whether A.I. weapons will be built; it is who will build them and for what purpose. Our adversaries will not pause to indulge in theatrical debates about the merits of developing technologies with critical military and national security applications. They will proceed."

Palantir CTO Shyam Sankar has called the use of AI a seismic shift in modern warfare, saying, "The planning that happened [in the Iran conflict] was done in a fraction of the time it would have taken in prior conflicts of this scale, and we accomplished more than twice as much per day of strikes." He said, "We forget that in World War II, only 6% of bombs dropped actually hit their target."

Palantir's Maven Smart System (MSS) is currently being used by the military to revolutionize what are called "targeting and logistics operations."

As Bloomberg has reported, MSS aggregates and processes large volumes of battlefield data, "accelerating what has traditionally been a slow and layered targeting process" and facilitating "faster identification and prioritization of targets."

As a result, according to Navy Adm. Brad Cooper, commander of United States Central Command, in less than 40 days, 90% of Iran's defense industrial base was destroyed.

"The defense industrial base for their drones and their missiles in their navy were degraded by 90%; they have about 10% left," he said on May 14.

Meanwhile, the Ukrainian military is reportedly using Palantir's AI platform, PRISMA, to guide drone strikes deep into Russian-held territory. CEO Karp has traveled to Ukraine, appearing with President Zelensky and Defense Minister Mykhailo Fedorov, and says he is on a Russian "hit list" as a result.

Trusting President Trump

In this context, I would rather have these data centers built and AI deployed under President Trump as he rebuilds the military. I trust him more than any Democrat or "progressive." And I certainly don't trust the Chinese role in a United Nations-backed system of "global governance" endorsed by the Vatican for the uses of the technology.

However, AI could also boomerang against us. As Jerry Kenney notes, the easiest way for an enemy to defeat us is to hack our devices and infrastructure and then shut them off or make them unusable or unreliable or worse, turn our own AI against us. He says that U.S. military planners have to work with industry to develop standards to make all things that are connected to the Internet capable of working as "stand alone" without any internet connections. "Everything should have a physical reset button that will bring it back to its original state," he says. "We are way too vulnerable."

America's AI Advantage Under Trump

In this regard, President Trump on June 2 issued an executive order, Promoting Advanced Artificial Intelligence Innovation and Security," that has a section, "Upgrading American Systems for Advanced AI," which declares a federal effort to "prioritize the cyber defense of National Security Systems…" and establish "AI-enabled defensive tools." At the same time, it demands reduced regulation by eliminating "the bureaucratic constraints" on "America's AI developers and researchers."

Kenney argues that the "voluntary" controls of the kind proposed for the corporations are not sufficient and that "unregulated AI will be more powerful than nuclear weapons." However, is the federal government capable of regulating this technology? Should this power be put in the hands of federal bureaucrats rather than private companies at this stage in AI's development?

President Trump's inauguration included Amazon founder Jeff Bezos, Meta boss Mark Zuckerberg, Apple leader Tim Cook, and Google chief Sundar Pichai. I am suspicious of their power. Under pressure from the Biden regime, Google's YouTube censored me for three years.

Patrick Wood was on one of my programs discussing the plan for a "technocracy" using Artificial Intelligence to control the people. I fear that possibility.

However, like crypto currency, I have come to the conclusion that AI itself is inevitable. As such, for the sake of America's survival, it must be allowed to play a central role in such areas as war planning and high-speed U.S. strike operations. And since it is argued that AI weapons can be more powerful that nuclear bombs, it is imperative that the United States have the most advanced offensive and defensive capabilities.

We must play an active role in how this technology is developed and regulated rather than revert to a Luddite approach of stopping progress.

We must understand that AI is already being utilized in all walks of life. It functions like a human brain that operates quickly and more efficiently. However, like any brain or computer, it depends on its sources of information.

In summary, while the opposition to Big Tech and AI technology has produced an alliance of strange political bedfellows, there are dangers going forward, since the "progressives" and their communist backers and funders are better organized and more dangerous.

Responsible conservatives don't want to be dupes in a campaign whose ultimate goal is to undermine America's military superiority now and in the future. They must focus on stopping domestic use of the data to monitor and censor the American people and facilitating the wise military use for the benefit of all of our people. America's survival depends on it.

*Cliff Kincaid is president of America's Survival, Inc. www.usasurvival.org Described as one of the most censored journalists in the world, he is a veteran journalist and media critic who concentrated in journalism and communications at the University of Toledo, where he graduated with a Bachelor of Arts degree in 1978. At his college newspaper, Cliff won an award for editorial writing from the Society of Professional Journalists and came to Washington through a national journalism program headed by conservative author and journalist M. Stanton Evans. Hired out of college by Accuracy in Media (AIM) founder Reed Irvine, Cliff served as editor of the AIM Report and director of the Accuracy in Media Center for Investigative Reporting. He co-hosted CNN's "Crossfire" program in 1986. Cliff served on the staff of Human Events for several years and was an editorial writer and newsletter editor for former National Security Council staffer Oliver North at his Freedom Alliance educational foundation. Cliff appeared in a Newseum film on media bias and anonymous sources and his overseas assignments have included Japan, the Philippines, South Korea, Thailand, Republic of China on Taiwan (1985), England, France, East and West Germany (1983), and Haiti (1981).

Cliff is the author or co-author of several books, including *Blood on His Hands: The True Story of Edward Snowden*, *Back from the Dead: The Return of the Evil Empire*, *Red Jihad: The Sword of Revolution and the Communist Apocalypse*, *Marxist Madrassas,*

Comrade Obama Unmasked: Marxist Mole in the White House, and *Red Star Rising: The Making of Barack Hussein Obama and the Transformation of America.*
